Training Course Overview

Supply Chain Management (SCM) is the broad range of activities required to plan, control and execute a product's flow, from acquiring raw materials and production through distribution to the final customer, in the most streamlined and cost-effective way possible.

Supply Chain Management is the golden tool to operate the efforts of logistics, warehouses, procurement, transportation and other support service sections toward the success of supporting the end user.

The Processes and Tools for Supply Chain Success training course is the best way to get new theoretical and practical experience to get the know-how experience of doing the job done.

This popular Anderson training course will support you to develop tools and achieve success to manage these massive duties proactively, allowing you to meet deadlines and deliver against your objectives.
