Online Training Course Overview

New technologies enable entities and organizations to streamline their processes and use the data storage and processing power of the whole organization, and with the introduction of the Cloud solutions this sharing has come to the new heights.

The Cloud services actually can provide the way to use the software on any machine connected to the internet and be able to share the data among multiple participants anywhere in the world.

With great opportunities come great risks as this data can be accessed, corrupt and abused by the unauthorized users and therefore realizing the possible attack vectors to our data and our systems and preparing for adequate prevention and recovery is the focus of this course also.

This popular Anderson online training course equips the delegates with the skills necessary to decide on the Cloud models adequate for their organization and the ways to protect the data from intrusion, as well as to take adequate recovery measures in case there is unwanted event related to our data or systems. Be both successful and secure.

Online Training Course Objectives

By attending this Anderson online training course, delegates will be able to:

- Define the Cloud services and types
- Effectively recognise adequate Cloud solution for their companies or institutions
- Use the Cloud vendor service contracts to ensure confidentiality, integrity and availability of their data
- Identify cybersecurity risks
