Cloud Enterprise Systems Management

Managing IT Systems in Contemporary Organization

▶ Training Details

Training Course Overview

Cloud systems became the de-facto solution for organizations from all different sectors. Almost every modern organization is using at least one form of cloud system that can be functional, enterprise or network. Cloud systems entail 3rd party involvement in a stage or more of the cloud service delivery. It is important for those who make decisions about which cloud system to use, purchase or manage to familiarize themselves with some crucial practices to maximize benefits and minimize risk.

This training course will feature:

- Cloud systems, value and opportunities
- Architectures and models for cloud systems management
- Managing cloud systems risks
- Cloud systems security
- A framework for evaluating cloud providers
- Contracting 3rd party cloud service provider

Training Course Objectives

By the end of this training course, participants will be able to:

- Develop the ability to understand issues associated with the organizational adoption of Cloud services
- To be able to manage the transition from traditional infrastructure to Cloud services for a business.
- To evaluate the risk and opportunities of the changing landscape of cloud systems services
