Online Training Course Overview

New technologies enable entities and organizations to streamline their processes and use the data storage and processing power of the whole organization, and with the introduction of the Cloud solutions this sharing has come to the new heights. The Cloud services actually can provide the way to use the software on any machine connected to the internet and be able to share the data among multiple participants anywhere in the world. With great opportunities come great risks as this data can be accessed, corrupt and abused by the unauthorized users and therefore realizing the possible attack vectors to our data and our systems and preparing for adequate prevention and recovery is the focus of this course also. This popular Anderson online training course equips the delegates with the skills necessary to decide on the Cloud models adequate for their organization and the ways to protect the data from intrusion, as well as to take adequate recovery measures in case there is unwanted event related to our data or systems. Be both successful and secure.
